The Supervisor of the factory took the students to various sections of the technical instrument, manufacturing raw material sections and explained the following.

- 1) The testing of purity of milk by various methods like melting point, boiling point, composition, viscosity etc.
- 2) The testing of quality of milk and milk products.
- 3) The packing of milk and milk products.
- 4) Finally checking of micro organisms present in the milk and milk products by UV-light rays

INDUSTRIAL VISIT- III

Department	:	CHEMISTRY
Name of the Activity	:	INDUSTRIAL VISIT
Date & Time	:	13.10.2017 & 2.00 p.m to 5.00 p.m
Place of Visit	:	TWAD Board Thoothukudi District
List of Beneficiaries	:	III B.Sc. Chemistry

Brief Report:

The III B.Sc. Chemistry students were taken as industrial visit to TWAD Board Water Analysis at Thoothukudi District on 13.10.2017.

Our students gained industrial knowledge about the Water purification generally means free from any kind of impurity from it contains, such as contaminaminats or micro organisms.

1. Settling

Before the purification process begins some contaminants, such as soil, mud, dust can be settled in a settling tank. They can then be removed easily, after they have reached the bottom of the tank.

2. Removal of dangerous microorganisms

Often polluted water has to be freed from microorganisms. The water is disinfected, usually by means of chlorination.

3. Removal of dissolved solids.

4. Physical/chemical techniques.

Chemical treatment often deals with the addition of certain chemicals.

Physical treatment usually deals with purification steps such as filtration.
